

Tutorial 1
[Watch the video](#)

Amazing \$5 webhosting

[\\$5 webhosting](#) or [premium business hosting](#)

In this tutorial you are going to learn, how to register your own domain name and sign-up for a cheap webhosting-plan.

Disclosure: We receive compensation from the companies whose products we review. We test each product thoroughly and give high marks to only the very best. We are independently owned and the opinions expressed here are our own.

We have selected two hosting providers who both offer a premium service at a cheap monthly rate.

During the past 10 years we have tested both these companies and found them to be reliable and honest with a great customer service, 99,9% up-time and always ready to help you with any issue.

Both companies offer: Unlimited emails, unlimited domain names, unlimited bandwidth, unlimited databases, unlimited monthly visitors, free Adwords- and Bing credits, WordPress-install and 24/7 tech support.

Hostgator caters to the more experienced users, also known as computer nerds, and will charge a bit more due to their advanced control-panel.

Fatcow is our recommended choice for normal people, who are looking for a cheap and user friendly setup that still includes most of the advanced features of a premium account.

First step is to select your domain name and check availability. Once you find a suitable domain name, simply enter your billing details and select a payment-plan.

We recommend using monthly payment, though the fee is a bit higher, using monthly payments will allow you to get started on a small budget and you will have the confidence in knowing the exact monthly upkeep of your website.

The sign-up page will up-sell a few extras, but to keep startup cost at a minimum, we recommend that you only select "SSL Certificate" and maybe "domain privacy".

If you want to get started as cheaply as possible, you can always buy domain privacy at a later time, so in this example we will disable domain privacy. In a later video we will show you how to do backups of your website, so here you can also save some money by making your own backups.

Fatcow offers one hosting plan while **Hostgator** offers 3 hosting plans.

If you are going for **Hostgator** we recommend the Baby plan or Business plan.

Baby plan is only \$1 more than the Hatchling plan but includes unlimited domain names and unlimited emails. And who knows, maybe in the future you want to make an another website...

Find your desired domain name and choose the Baby plan or Business plan.

Again select only "SSL certificate" and maybe "domain privacy". The [Hostgator](#) business plan includes "SSL certificate" so it costs a little more than the Baby plan.

This is the end of the tutorial.

I hope you are well on your way to finding a great domain name for your website, and signing-up for a cheap hosting-plan. Go ahead and get started with that, and I will see you in the next tutorial, where you will learn how to make a professional looking website in 15 minutes.
